Washington, DC 20554

Dear Chairman Martin and FCC Commissioners:

I am writing to urge the Federal Communications Commission to promote telecommunications choice and competition in the Phoenix region.

Recent press reports – including the June 1, 2008 *Arizona Republic* editorial “Preserve Competition” – reveal that Qwest is lobbying for deregulations that would raise prices estimated to total more than \$500 million per year in the Arizona market. Local customers, particularly small businesses, would likely have fewer choices other than Qwest for their phone and broadband services.

To be sure, new technologies like wireless and so-called VoIP (“Voice over Internet Protocol”) phone service are exciting options for consumers, but for most residents and employers they are still no substitute for the landline voice and broadband products – a market that continues to offer too few alternatives to Qwest. Yet, granting Qwest’s lobbying effort would decrease, not increase, the already limited choices that customers have in today’s world where Internet communications is a prerequisite for economic opportunity.

Allowing Qwest to assert without factual basis that competitive inroads in one market (wireless) somehow justify anti-competitive deregulations in an altogether different one (business broadband) could have tremendous implications for our region.

If granted, this petition would allow Qwest near complete control of the Phoenix market, raise prices on businesses and consumers, and negatively impact the local economy in a time of already significant uncertainty from high gas prices and foreclosures.

I respectfully ask that you consider these implications and do everything in your power to preserve telecommunications competition and choice for Phoenix customers.

Sincerely,

Spring G. Eselgroth

Dear Chairman Martin and FCC Commissioners:

I am writing to urge the Federal Communications Commission to promote telecommunications choice and competition in the Phoenix region.

Recent press reports – including the June 1, 2008 *Arizona Republic* editorial “Preserve Competition” – reveal that Qwest is lobbying for deregulations that would raise prices estimated to total more than \$500 million per year in the Arizona market. Local customers, particularly small businesses, would likely have fewer choices other than Qwest for their phone and broadband services.

To be sure, new technologies like wireless and so-called VoIP (“Voice over Internet Protocol”) phone service are exciting options for consumers, but for most residents and employers they are still no substitute for the landline voice and broadband products – a market that continues to offer too few alternatives to Qwest. Yet, granting Qwest’s lobbying effort would decrease, not increase, the already limited choices that customers have in today’s world where Internet communications is a prerequisite for economic opportunity.

Allowing Qwest to assert without factual basis that competitive inroads in one market (wireless) somehow justify anti-competitive deregulations in an altogether different one (business broadband) could have tremendous implications for our region.

If granted, this petition would allow Qwest near complete control of the Phoenix market, raise prices on businesses and consumers, and negatively impact the local economy in a time of already significant uncertainty from high gas prices and foreclosures.

I respectfully ask that you consider these implications and do everything in your power to preserve telecommunications competition and choice for Phoenix customers.

Sincerely,

Lidia Mada

Washington, DC 20554

Dear Chairman Martin and FCC Commissioners:

I am writing to urge the Federal Communications Commission to promote telecommunications choice and competition in the Phoenix region.

Recent press reports – including the June 1, 2008 *Arizona Republic* editorial “Preserve Competition” – reveal that Qwest is lobbying for deregulations that would raise prices estimated to total more than \$500 million per year in the Arizona market. Local customers, particularly small businesses, would likely have fewer choices other than Qwest for their phone and broadband services.

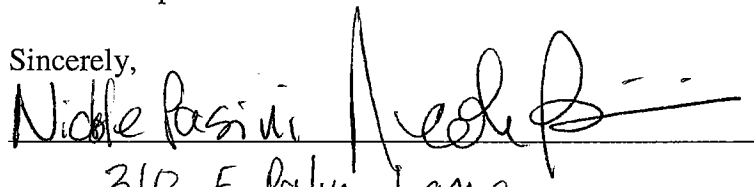

To be sure, new technologies like wireless and so-called VoIP (“Voice over Internet Protocol”) phone service are exciting options for consumers, but for most residents and employers they are still no substitute for the landline voice and broadband products – a market that continues to offer too few alternatives to Qwest. Yet, granting Qwest’s lobbying effort would decrease, not increase, the already limited choices that customers have in today’s world where Internet communications is a prerequisite for economic opportunity.

Allowing Qwest to assert without factual basis that competitive inroads in one market (wireless) somehow justify anti-competitive deregulations in an altogether different one (business broadband) could have tremendous implications for our region.

If granted, this petition would allow Qwest near complete control of the Phoenix market, raise prices on businesses and consumers, and negatively impact the local economy in a time of already significant uncertainty from high gas prices and foreclosures.

I respectfully ask that you consider these implications and do everything in your power to preserve telecommunications competition and choice for Phoenix customers.

Sincerely,

Dane Johnston

Dear Chairman Martin and FCC Commissioners:

I am writing to urge the Federal Communications Commission to promote telecommunications choice and competition in the Phoenix region.

Recent press reports – including the June 1, 2008 *Arizona Republic* editorial “Preserve Competition” – reveal that Qwest is lobbying for deregulations that would raise prices estimated to total more than \$500 million per year in the Arizona market. Local customers, particularly small businesses, would likely have fewer choices other than Qwest for their phone and broadband services.

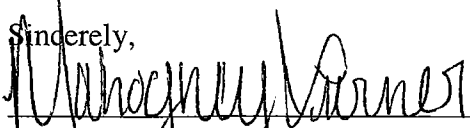

To be sure, new technologies like wireless and so-called VoIP (“Voice over Internet Protocol”) phone service are exciting options for consumers, but for most residents and employers they are still no substitute for the landline voice and broadband products – a market that continues to offer too few alternatives to Qwest. Yet, granting Qwest’s lobbying effort would decrease, not increase, the already limited choices that customers have in today’s world where Internet communications is a prerequisite for economic opportunity.

Allowing Qwest to assert without factual basis that competitive inroads in one market (wireless) somehow justify anti-competitive deregulations in an altogether different one (business broadband) could have tremendous implications for our region.

If granted, this petition would allow Qwest near complete control of the Phoenix market, raise prices on businesses and consumers, and negatively impact the local economy in a time of already significant uncertainty from high gas prices and foreclosures.

I respectfully ask that you consider these implications and do everything in your power to preserve telecommunications competition and choice for Phoenix customers.

Sincerely,

Ruth Klammer

Dear Chairman Martin and FCC Commissioners:

I am writing to urge the Federal Communications Commission to promote telecommunications choice and competition in the Phoenix region.

Recent press reports – including the June 1, 2008 *Arizona Republic* editorial “Preserve Competition” – reveal that Qwest is lobbying for deregulations that would raise prices estimated to total more than \$500 million per year in the Arizona market. Local customers, particularly small businesses, would likely have fewer choices other than Qwest for their phone and broadband services.

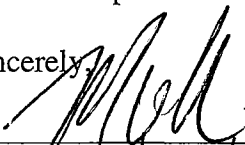

To be sure, new technologies like wireless and so-called VoIP (“Voice over Internet Protocol”) phone service are exciting options for consumers, but for most residents and employers they are still no substitute for the landline voice and broadband products – a market that continues to offer too few alternatives to Qwest. Yet, granting Qwest’s lobbying effort would decrease, not increase, the already limited choices that customers have in today’s world where Internet communications is a prerequisite for economic opportunity.

Allowing Qwest to assert without factual basis that competitive inroads in one market (wireless) somehow justify anti-competitive deregulations in an altogether different one (business broadband) could have tremendous implications for our region.

If granted, this petition would allow Qwest near complete control of the Phoenix market, raise prices on businesses and consumers, and negatively impact the local economy in a time of already significant uncertainty from high gas prices and foreclosures.

I respectfully ask that you consider these implications and do everything in your power to preserve telecommunications competition and choice for Phoenix customers.

Sincerely,

Gerard Lee Gerard Lee
